## Proportional Reasoning

| Direct Proportion (NonAlgebraic) | Calculate missing walues using direct proportion. <br> Include Pie Chart calculations | Helping friends move house |
| :---: | :---: | :---: |
| Recipes | Use proportionality to scale ingredients for required amounts. Use unitary and multiplicative reasoning methods. Include problems involving limiting factors. | Be able to scale upidown a recipe you want to cook. Working out how muchtmany you can make with the ingredients you have |
| Best Buy Problems | Calculate unit costs and scaling methods in order to compare the best value. Also include problems with non unitary offers such as percentage and buy one get one free etc. | Shopping - getting the most for your money |
| Conversion Graphs | Use conversion graphs to calculate a variety of conversions. Including those that are beyond the given graph scale. Include situations that require use of multiple conversion graphs and currency conversions. | Being able to use to convert between different currencies when going on holiday |
| Exchange Rates | Use given exchange rates of any currency to convert given amounts. Include situations that require more than one conversion. Use exchange rates to compare best value. | Getting the most for your money whether to buy at home or abroad. Understanding how exchange rates work for going on holiday |
| W'ater Project 2-3lessons | Finding the best walue for money Converting units Converting currency Using Conversion graphs |  |
| Direct Proportion (NonAlgebraic) | $\begin{aligned} & \text { Colculste mizsing values using direct } \\ & \text { proportion. } \\ & \text { lacluds Pic Chart calculations } \end{aligned}$ | Helping friends move house |
| Recipes | Use proportionslity to zesle ingredientz for required smounts. Ule unitary snd multipliestive reasoning methods. Include problems involving limiting factors. | Be sble to scale upidown a recipe you want to cook. 'working out how muchimany you can make with the ingredient $=$ you have |
| Beat Buy Problems | Calculate unit costs and sesling methods in order to compare te best value. Also include m problems with non unitary offers zuch sz percentage and buy one get one free ete. | Shopping-getting the most for your money |
| Conversion Graphs | Use conversion graphs to calculate a variety of conversions. Including those that are beyond the given graph ecsle. Include situations that require use of multiple conversion graphs and currency conversions. | Esing ableto use to convert between different currencies when going on holiday |
| Exchonge Ristes | Use given exchange rates of any currency to convert given amounts. Include situstions that require more thon one conversion. Use exchange rates to compare best value. | Getting the most for your money whether to buy at home or abroad. Understanding how exchange rates work for going on holiday |
| Similar Shopee with Lengths | Calculate similar lengthe of shapes both larger and amiller. Understand that the angle is not sffected. | Designers and architects scaling up drowing= |
| Whater Project 2-3 lessons | Finding the best value for money <br> Converting units <br> Converting currency <br> Using Conversion graphs |  |

| Direct Proportion (NonAlgebraic) | Calculate missing values using direct proportion. <br> Include Pie Chart calculations | Helping friends move house |
| :---: | :---: | :---: |
| Recipes | Use proportionality to scale ingredients for required amounts. Use unitary and multiplicative reasoning methods. Include problems involwing limiting factors. | Be able to scale upidown a recipe you want to cook. Working out how muchdmany you can make with the ingredients you have |
| Best Buy Problems | Calculate unit costs and scaling methods in order to oompare the best value. Also include problems with non unitary offers such as percentage and buy one get one free etc. | Shopping - getting the most for your money |
| Conversion Graphs | Use conversion graphs to calculate a variety of conversions. Including those that are beyond the given graph scale. Include situations that require use of multiple conwersion graphs and currency | Being able to use to convert between different currencies when going on holiday |
| Exchange Riates | Use given exchange rates of any currency to convert given amounts. Include situations that require more than one conversion. Use exchange rates to compare best walue. | Getting the most for your money whether to buy at home or abroad. Understanding how exchange rates work for going on holiday |
| Similar Shapes with Lengths | Calculate similar lengths of shapes both larger and smaller. Understand that the angle is not affected. | Designers and architects soaling up drawings |
| Similar Shapes (Area and Volurne) | Calculate similar areas and volumes. | Designers and architects scaling up drawings into 3D objectst buildingsistructures |
| W'ater Project 2-3 lessons | Finding the best walue for money Converting units Converting currency Using Conversion graphs |  |

Key Knowledge/Prior Learning KS2/3 and Retrieval and Suggested Starters

- Increasing or decreasing an amount by a percentage when finding the best value for money e.g. discount in a sale or increase of VAT.
- Identifying straight line graphs.
- Converting units of length and area.
- Ratio (unitary method)
- Division
- Multiplication
- Decimals

## KS3 National Curriculum - what students will be practicing and Key Questions

- Calculating missing values using direct proportion. Explore different methods by either scaling up or down or using unitary method.
- Using proportionality to scale recipes for required amounts, including problems where students are given limiting factors
- Comparing different products and identifying which one is the better value for money.
- Using a conversion graph to convert between different units including length and currency.
- Using exchange rates to convert between different currencies. Use real life examples and discuss the difference between buy and sell exchange rates.
- Understanding the definition of similar shapes and using previous knowledge of converting units of length and area to find the length and area of similar shapes.

## Specific Ambitious Knowledge

- Exploring different methods by either using multiplicative methods or the unitary method.
The relationship between length scale factors and area scale factors.

## Key Vocabulary/Literacy Opportunities

- Similar
- Congruent
- Proportion
- Exchange
- Conversion
- Direct proportion
- Indirect proportion
- Unitary method

Key Formulae/Knowledge (Misconceptions)
Unitary Method

Multiplicative Method 4 sandwiches $\Rightarrow 2$ loaves $a \Longrightarrow b$
24 sandwiches $\Rightarrow$ x loaves
$c \Longrightarrow x$

Direct Vs Indirect Proportion
Direct and Inverse Proportion

Students not understanding context and using direct proportion
Finding exchange rates

$$
\begin{gathered}
\text { Exchange } \\
\text { Rate }
\end{gathered}=\frac{\text { Money in After Exchange }}{\text { Money Before Exchange }}
$$

Exchange rates egg.

```
\(c=a \times b \quad \underline{a}=\) money you have
                        \(c=\) money after
                exchange
Example:
\(a=\$ 1,500\) (USO) ; \(b=0.7618\)
    \(1,500 \times 0.7618\)
    : \(1,142.70\) EUR
```

## Maths in Context (Historical, Real Life and Student Thinking Points)

## Projects/Enrichment/Investigations

Water project - Students are in charge of a company that sells bottled water. The company is looking to:

- Sell different bottles at different prices so students will need to compare them and find the best value.
- Open offices in different places so students will need to convert between different distances and currencies
